Professional Summary:

- Having 6 years of IT experience in the areas of Data Science and website development.
- Expertise in application development using Python, pandas, Flask, Django, PostgreSQL, and etc.
- Experience in the development phase of Data science project and web applications.
- Excellent team leader and ability to perform well under pressure.

Career Path:

Infinite Computer Solutions (Senior Software Developer)	Feb, 2025 – Present
Extrapreneurs India (Senior Software Developer)	Aug, 2022 – Oct, 2024
I2E Consulting (Python Developer)	Apr, 2021 – May, 2022
KayaDev AI Pvt. Ltd, Bengaluru (Junior Data Scientist)	Mar, 2019 – Jul, 2020

Working Experience:

Project Name	iCounter
Company Name	KayaDev AI
Tools	Python, Flask, Postman, GitHub, OpenVino, PostgreSQL
Abstract	In this project, we are processing CCTV videos to detect employee wear the mask or not. In these pandemics, following all hygiene is so important. So, we develop a product which allows insuring about all environment. Also, it shows the heatmap for people's most visited areas.
Responsibilities	• Utilized OpenCV to process CCTV video streams in real time to detect and track employees. • Implemented mask detection algorithms based on computer vision techniques to identify whether employees were wearing masks or not. • Leveraged machine learning models for accurate mask classification,

	improving detection accuracy during varying lighting conditions. • Built the backend of the application using Flask to handle API requests, manage video streams, and serve processed data to the frontend. • Developed endpoints for fetching real-time employee mask status and heatmaps, ensuring smooth communication between the frontend and backend. • Designed and integrated a PostgreSQL database to store and manage data related to employee counts, mask detection results, and heatmap statistics. • Created optimized database queries to fetch aggregated employee data and heatmap details for reporting and analysis. • Collaborated with frontend developers to visualize the mask detection status and employee heatmaps, ensuring data was presented in a clear, actionable format. • Developed real-time dashboards for administrators to monitor mask compliance and identify high-traffic areas within the workspace. • Optimized video processing pipelines for real-time performance, minimizing latency in mask detection and employee counting. • Improved system efficiency by implementing asynchronous processing and using background tasks to handle heavy computations. • Conducted unit testing and end-to-end testing for the mask detection algorithm, video processing, and database operations to ensure the system's reliability. • Worked on debugging and fixing issues related to object detection, database performance, and API stability.
--	---

Project Name	Bravisa Temple Tree - Stock Market analyzing backend design
Company Name	KayaDev AI
Tools	Python, Flask, Postman, GitHub, PostgreSQL
Abstract	This project is developed as per client requirement for analyzing the stock market behavior by processing all previous data of the market. In project contain a simple UI for increase the productivity and decision-making process and accuracy.
Responsibilities	• Designed and implemented backend services using Python and Flask to handle data processing and serve as the core logic for the stock market analysis platform. • Developed RESTful APIs to fetch, process, and return analytical insights to the frontend in a seamless manner. • Performed ETL operation to fetch data from Stock market CSV files. • Designed and managed a PostgreSQL database schema to store historical stock market data and analysis results. • Optimized queries for efficient retrieval and processing of large datasets to ensure smooth performance. • Built algorithms to process and analyse historical stock market data, identifying patterns and trends. • Integrated data pipelines to ingest real-time and historical data from multiple sources for analysis. • Collaborated with UI developers to integrate the backend with a user-friendly interface for improved productivity and decision-making processes. • Ensured the platform provided accurate and timely insights for end-users. • Implemented caching mechanisms and query optimizations to improve backend response times.

	• Debugged and resolved performance bottlenecks to handle high volumes of data efficiently. • Conducted rigorous testing to ensure reliability and accuracy of data analysis functionalities. • Deployed the Flask application on cloud servers, ensuring scalability and security. • Worked closely with the client to understand specific requirements and tailored the solution to meet their expectations. • Provided regular updates and incorporated client feedback into the development process.
--	--

Project Name	Pfizer Backend development
Company Name	I2E Consulting
Tools	Python, Flask, Postman, GitHub, PostgreSQL, MongoDB
Abstract	This project is developed as per client requirement for analyzing health care data behavior by processing all previous data available. In project contain a simple UI for increase the productivity and decision-making process and accuracy.
Responsibilities	• Designed and implemented backend systems using Python and Flask to process and analyse patient behaviour data effectively. • Developed robust algorithms to process large volumes of historical patient data, enabling accurate analysis for client needs. • Designed and optimized PostgreSQL databases to handle complex queries and ensure data integrity and scalability. • Built RESTful APIs using Flask to enable seamless data integration with the front-end UI and third-party systems. • Collaborated with the UI/UX team to integrate a simple and user-friendly interface, improving productivity and decision-making processes. • Worked closely with stakeholders to gather client requirements and ensure that the application aligns with the client's objectives for analysing patient behaviour. • Enhanced system performance by optimizing queries, code, and server-side logic for faster data processing and improved response times. • Conducted rigorous unit and integration testing to ensure reliability, accuracy, and robustness of the application. • Created comprehensive documentation for code, APIs, and database architecture to facilitate maintenance and future development. • Collaborated with cross-functional teams, including data scientists, front-end developers, and project managers, to deliver high-quality solutions.

Project Name	Timesheet Portal
Company name	I2E Consulting
Tools	Python, Flask, Postman, GitHub, PostgreSQL
Abstract	This project is developed for manage the employee In-Out time and manage their respective files and daily timesheet. In project contain a simple UI for increase the productivity and decision-making process and accuracy.

Responsibilities	- Designed and implemented backend logic using Python and Flask to handle employee in-out time management and daily timesheet records. - Developed database schemas and queries in PostgreSQL for efficient storage and retrieval of employee data and timesheets. - Integrated file management functionality to organize and maintain employee-related documents. - Built a user-friendly interface to improve productivity and enable accurate decision-making. - Ensured data integrity and security throughout the application by implementing robust validation and authentication mechanisms. - Conducted rigorous testing and debugging to deliver a reliable and efficient system. - Collaborated with stakeholders to gather requirements and incorporate feedback for continuous improvement.
-------------------------	---

Project Name	MonQual Document Management System
Company Name	I2E Consulting
Tools	Python, Flask, Postman, GitHub, PostgreSQL, MongoDB
Abstract	This project, We have to maintain the documents in the cloud with using MinIO . In project contain a simple UI for increase the productivity and decision-making process and accuracy.
Responsibilities	- Developed and maintained the backend using Python and Flask to ensure seamless document management and storage. - Designed and optimized PostgreSQL databases to manage and query document metadata efficiently. - Integrated MinIO for secure and scalable cloud-based document storage. - Built a user-friendly interface to improve productivity and facilitate accurate decision-making. - Implemented RESTful APIs for secure and reliable communication between the frontend and backend systems. - Ensured application scalability and performance through rigorous testing and optimization. - Collaborated with cross-functional teams to gather requirements and provide technical solutions. - I have experience in technical writing for respective project and coding.

Project Name	ABP Licensees
Company Name	Extrapreneurs India
Tools	Python, Django, Postman, GitHub, PostgreSQL, AWS, Jira
Abstract	This project is developed as per client requirement for analyzing monthly revenue by processing all incoming and previous data in database. In project contain a simple UI for increase the productivity and decision-making process and accuracy.
Responsibilities	- Developed and maintained web applications using Python, Django, and RestAPI frameworks. - Extensively used OOPS concept for project. - Utilized Django REST Framework to build RESTful APIs for data

	communication between front-end and back-end systems. • Conducted manual testing (SIT) and worked closely with QA team to ensure software quality. • Utilized Agile methodologies for project management and participated in sprint planning and retrospective meetings. Tracked project progress and managed tasks using Jira issue tracking system. • Worked with clients to gather feedback, clarify requirements, and provide technical support. • Leveraged AWS services, including CloudWatch, EC2, ECS, ECR, S3, Route53, SFTP and deployment pipelines, to build scalable and reliable applications. • Used GitHub for version control, Branching and collaborated with the team on code reviews, merging and pull requests • I have experience to handle 4 members in team. • I have experience in technical writing for respective project and coding. • Worked on Python Integration Platform. • Worked with Docker.
--	--

Project Name	Pathward Bank
Company Name	Infinite Computer Solutions
Tools	Python, AWS, Postman, GitHub, PostgreSQL, TerraForm, Swagger, Finzly, ClearTouch, Bridger
Abstract	This project is developed as per client requirement for analyzing monthly revenue by processing all incoming and previous data in database. In project contain a simple UI for increase the productivity and decision-making process and accuracy.
Responsibilities	• Designed and developed banking APIs using AWS Lambda, API Gateway, Axway, and OpenAPI (Swagger 3.0) • Integrated third-party systems including Finzly, ClearTouch, and Bridger • Implemented authentication using DPoP, OAuth2, and Basic Auth • Built Python-based Lambda functions with structured logging and traceability • Implemented custom error handling and response masking for external APIs • Managed AWS infrastructure using Terraform, resolving API Gateway and DynamoDB issues • Converted Postman collections to OpenAPI 3.0, fixing schema and validation errors • Troubleshoot external API issues such as 415 errors and authentication failures

Technical Skill:

Language	Python,
Cloud Technology	AWS S3, DynamoDB, Lambda, CloudWatch
Framework	Flask, Django, FastAPI
DBMS/RDBMS	SQL, PL-SQL, MSSQL, PostgreSQL, MySQL 8.0, MongoDB 4.x.

Office Productivity Tools	JIRA, Git, MS-Office, MS-Excel, Postman.
Third-Party Tools	Notepad++, Sublime Text Editor, Visual Code.
Operating System	Windows XP/7/8/10/11, Ubuntu 18.4, BOSS
Domain Knowledge	Stock market, Healthcare, Management, Banking
Methodologies	Agile

PostGraduate Diploma Project:

Project Name	New house price analysis in Pune city.
Abstract	Everyone dreams about a house of his own where he can dwell in peace and happiness with his family. Three to four years ago the rates of property were skyrocketing. In such circumstances, a salaried general working-class person could only dream of buying a good house at a reasonable price. Pune ranked 210th in the global list of expensive cities. People who are coming to this city to stay, help them according to their budget. To give insight, we will use machine learning techniques and different price types of algorithms for our modeling purpose, so it will come with the predicted prices own home.

Engineering Project:

Project Name	Multimedia Piracy Detection Using Invisible Watermarking.
Abstract	The project aim is to use a single Interface for detecting piracy in multimedia files. This mechanism was the same as a watermark on the paper but the difference is it implements on the digital files. As a watermark, we can insert any text information which proves the authentication of the file.

Education & Awards:

- Secured 2nd prize in “YuVaUrJaa” annual gathering organized by S.S.C. Polytechnic, Chalisgaon.
- Participate in various state and national level competition.
- Participate in various project poster competition.
- Involved in the Organizing Team for the TECHNOFEST 2012 and 2013 held at LGNSCOE, Nasik.

Professional Responsibilities:

- Participated in Client Demo weekly basis.
- Requirements understanding and analysis.
- Good communication skills.
- Played a major role in Coding, Build, Deployment, and Support.
- Proper Documentation.
- Product Testing.
- Deployed Testing

- Deployment and support.

Educational Qualification:

Exam	College/University	Year	Percentage/ CGPA
Masters in Data Science and Engineering	Bits, Pilani	Pursuing	6
Postgraduate Diploma in Big Data Analysts	CDAC, Chennai	2018-19	70.00
B.E. in Computer Engineering	Pune University	2016	60.40
Diploma in Computer Technology	MSBTE	2012	68.06
SSC	Maharashtra Board	2009	71.23

Personal Details:

Date of Birth	01 December 1993
Marital Status	Married
Languages Known	English, Hindi, Marathi, and Ahirani
Nationality	Indian
Hobbies and interests	Trekking, reading books, traveling to new places.
Passport Available	U2599845

I hereby declare that the above information is correct up to my knowledge and I bear the responsibility for the correctness of the above-mentioned particulars.

Place – Pune
