Professional Summary

Senior Software Developer with 6+ years of experience in Python backend development, data engineering, and cloud-based systems. Expertise in building scalable APIs, ETL pipelines, and analytics platforms using Flask, Django, AWS, and PostgreSQL. Proven track record in banking and analytics platforms, improving system performance, reliability, and data processing efficiency while ensuring high availability and performance optimization.

Work Experience

Infinite Computer Solutions

Feb 2025 – Present

Senior Software Engineer

Pune, Maharashtra, India

- Designed and developed **15+ secure banking APIs**, improving system scalability and reducing latency by **~30%**
- Integrated third-party systems including Finzly, ClearTouch, and Bridger
- Implemented authentication mechanisms (OAuth2, DPOP, Basic Auth)
- Built scalable serverless applications handling high-volume transactions with structured logging and monitoring
- Managed infrastructure using Terraform and resolved API Gateway issues and improving deployment reliability

Extrapreneurs India Pvt Ltd

Aug 2022 – Oct 2024

Senior Software Developer

Pune, Maharashtra, India

- Developed scalable backend systems using Django and REST APIs
- Designed and optimized database queries, improving response time by 75%
- Deployed and managed applications on AWS (EC2, ECS, S3), ensuring high availability
- Led a team of 4 developers, improving delivery efficiency and code quality
- Utilized Agile methodologies for project management and participated in sprint planning and retrospective meetings.
- Authored technical documentation for APIs, system architecture, and deployment processes

I2E Consulting

Apr 2021 – May 2022

Python Developer

Mumbai, Maharashtra, India

- Built and maintained REST APIs using Python and Flask for reputed clients across multiple projects.
- Handled deployment, environment configuration, and testing across development, QA, and production environments.
- Delivered time-sensitive client deliverables, ensuring on-time delivery without compromising quality.
- Participated in end-to-end development, from requirement analysis to production support.
- Optimized API performance, reducing response time by ~40% through query tuning and caching

KayaDev AI

Mar 2019 – Jul 2020

Junior Data Scientist

Bengaluru, Karnataka, India

- Developed computer vision solutions using OpenCV for real-time video processing
- Built Flask-based APIs for integrating ML models into web applications
- Performed data analysis and validation to improve model accuracy
- Generated analytical reports to support decision-making

Projects

iCounter: Real-Time Mask Detection System | *Python, Flask, Postman, GitHub, OpenVino, PostgreSQL*

- Developed computer vision system using OpenCV for mask detection in CCTV streams
- Developed Flask backend for real-time processing and dashboard reporting
- Improved detection accuracy under varying lighting conditions.
- Developed real-time dashboards for administrators to monitor mask compliance and identify high-traffic areas within the workspace.
- Improved system efficiency by implementing asynchronous processing and using background tasks to handle heavy computations.

Stock Market Analysis Platform | *Python, Flask, Postman, GitHub, PostgreSQL, Data Analysis, Automation, Visualization*

- Designed backend system to analyze large-scale historical market data
- Built ETL pipelines and REST APIs for data processing
- Conducted deeper data analysis to uncover billing patterns and outliers, enhancing decision-making for finance and management teams.
- Optimized queries for high-volume data handling
- Optimized data flows and automated report generation, reducing manual processing and improving reporting efficiency by over 80%.

Healthcare Data Analytics Platform | *Python, Flask, Postman, GitHub, MongoDB, Data Analysis, API Development*

- Developed backend system for large-scale patient behavior analysis
- Built scalable APIs and optimized database performance
- Developed robust algorithms to process large volumes of historical patient data, enabling accurate analysis for client needs.
- Worked closely with stakeholders to gather client requirements and ensure that the application aligns with the client's objectives for analysing patient behavior.
- Enhanced system performance by optimizing queries, code, and server-side logic for faster data processing and improved response times.
- Created comprehensive documentation for code, APIs, and database architecture to facilitate maintenance and future development.

Timesheet Portal | *Python, Flask, Postman, GitHub, PostgreSQL*

- Designed and implemented backend logic using Python and Flask to handle employee in-out time management and daily timesheet records.
- Developed database schemas and queries in PostgreSQL for efficient storage and retrieval of employee data and timesheets.
- Integrated file management functionality to organize and maintain employee-related documents.
- Built a user-friendly interface to improve productivity and enable accurate decision-making.

ABP Licensees: Invoice validation and report generation process | *Python, Django, PostgreSQL, AWS, Jira*

- Developed and maintained web applications using Python, Django, and REST API frameworks.
- Designed modular and reusable components using OOP principles
- Utilized Django REST Framework to build RESTful APIs for data communication between front-end and back-end systems.
- Conducted manual testing (SIT) and worked closely with QA team to ensure software quality.
- Utilized Agile methodologies for project management and participated in sprint planning and retrospective meetings. Tracked project progress and managed tasks using Jira issue tracking system.
- Collaborated with stakeholders to gather requirements and deliver solutions.

- Leveraged AWS services, including CloudWatch, EC2, ECS, ECR, S3, Route53, SFTP, AWS-step functions and deployment pipelines, to build scalable and reliable applications.
- Worked with Docker

Education

Birla Institute of Technology, Pilani

Master of Technology — Majors: Data Science & Engineering

2024 – 2026

Bits Pilani, India

University of Pune

Bachelor of Technology in Computer Science and Engineering

2015 – 2016

Maharashtra, India

Technical Skills

Languages: Python, SQL

Frameworks: Flask, Django, FastAPI

Cloud & DevOps: AWS (Lambda, S3, EC2, DynamoDB), Terraform, Docker

Databases: PostgreSQL, MongoDB, MySQL

Core Concepts: REST APIs, Microservices, ETL Pipelines, System Design

Tools: Git, Jira, Postman, Swagger

AI Tools : ChatGPT, CoPilot, Kiro, Amazon Q

Languages

- Marathi – Mother tongue
- Hindi – Fluent
- English – Professional Working Proficiency
